Beginning and Ending Inventory Values are SUGGESTED. No single price for a grain or a forage is necessarily accurate for a single farm or all farms. Use these inventory values as a guideline or starting point and adjust for varying quality or market conditions. Ontario Farm Analysis Program (OFMAP) uses a single transfer value for the above feeds. INCREASE or DECREASE the amount fed to accommodate feeds of higher or lower quality.

Note that the OFMAP template programs use the transfer values above as defaults. Beginning, transfer and ending values can be changed to suit individual farm situations.
