

Horse News and Views

Under the Innkeepers Act of Ontario, a stable owner has the right to sell, at public auction, any horse if its owner has not paid for food, accommodation or labour provided to the horse for two weeks. Stable owners are required to give two weeks notice of the intended sale. An advertisement of the intended sale in a newspaper, published in the municipality in which the boarding stable is located, is sufficient notice of intent. The act can be viewed at http://192.75.156.68/DBLaws/Statutes/English/90i07_e.htm

To prevent/reduce ground water contamination, manure should be stored at a minimum of 100 feet from a watercourse or well. Clean water from eavestroughs or surface runoff should be diverted away from the manure storage area. It is important that every farmer be aware of the many sources of contamination that could make drinking water unsafe for human and animal consumption. Horse owners should attend the two-day Environmental Farm Plan workshop. Participants will learn their roles/responsibilities in maintaining the environment. For more information about the Environmental Farm Plan in your area, call 1-800-265-9751 or visit <http://www.gov.on.ca/OMAFRA/english/environment/efp/efp.htm>

The terms **cold blooded**, **warm blooded** and **hot blooded** are often confusing to a newcomer to the horse industry. According to *Summerhays' Encyclopaedia for Horsemen*, 1962, the hot blooded breeds include the Thoroughbred and the eastern breeds, e.g., the Arabian, Barb, Turk, Syrian, etc., or an admixture of these. The heavy draft (draught) breeds and the majority of cross-bred horses are often referred to as being cold blooded. The real confusion occurs with the term 'warm blood.' Breeds such as the Hanoverian, Trakehner, and Dutch Warmblood can trace their roots to the draft breeds with refinement from breeds such as the Thoroughbred and Arabian.
